Subject: your feedback on PFAS issues and policies

Dear Alex –

The American Chemistry Council (ACC), representing the interests of the US chemical industry, is conducting brief interviews to better understand stakeholders' thoughts on risks from per- and polyfluoroalkyl substances, commonly referred to as PFAS, on policies to address PFAS, including monitoring and treatment/cleanup techniques, and on efforts to better understand and communicate those risks and policies. Your name was identified as a result of your participation in a recent community engagement event held on these substances. I am writing you, an informed stakeholder, to encourage your participation in a survey of the needs and priorities for states, municipalities, utilities, and communities addressing this issue.

ACC has contracted with Long Research Consultants, an independent research firm, to gather feedback on key issues related to PFAS, how they are being addressed, and the role that ACC and its members can play in this important issue. A representative from Long Research may contact you by phone over the next few weeks to invite your participation. Respondents will be selected on a random basis. The interview will take about 20-30 minutes of your time. If you are contacted, thank you in advance for participating.

There is no need to prepare in advance for the interview, only your opinions are sought. During the interview, you will be invited to comment on key issues related to PFAS and what you would like to see happen within the industry to address these issues. Your feedback will be combined with other interviews to ensure individual confidentiality, and responses will only be reported in aggregate.

ACC will use the feedback to ensure our activities are in sync with the needs and priorities of those affected by PFAS.

Please feel free to contact me if you have any questions or comments.

Sincerely,

Steve

Stephen P. Risotto
